The Allstate America's Best Drivers Report® is the result of an in-depth examination of company claims data, to determine the likelihood drivers in America's 200 largest cities will experience a vehicle collision compared to the national average. According to Allstate claims data, the average driver in the U.S will experience one collision every 10 years. This year, Allstate researchers analyzed property damage claims reported during the two-year period of January 2014 to December 2015. The report defines a collision as any auto crash resulting in a property damage claim and uses U.S. Census Bureau data to determine America's 200 largest cities and to obtain the population density factor. For the precipitation factor, National Oceanic and Atmospheric Administration (NOAA) data was utilized. Hard-braking data is based on customers voluntarily enrolled in Allstate's Drivewise® telematics program from 2014-2015. A number of cities, and their surrounding suburbs, in the full 200 Best Drivers' rankings are excluded from hard-braking analysis due to limited measurable Drivewise data, or because Drivewise was not available (California, North Carolina, South Carolina and Texas). Allstate's auto policies represent nearly 10 percent of all U.S. auto policies, making this report a realistic snapshot of what's happening on America's roadways. The Allstate America's Best Drivers Report is produced solely to boost the country's discussion about safe driving and to increase awareness of the importance of being safe and attentive behind the wheel. The report is not used to determine auto insurance rates.
